Microsoft Access Project #1

Directions: As our first “project” in MS Access, you will be creating a database of 30 restaurants. You will have today in class to go onto the internet to find these restaurants. You will need to get the following information in order to start the database tomorrow.

1. Name of restaurant
2. Address of restaurant (includes physical address as well as city state and zip)
3. Phone number
4. Specialty (what type of food are they most known for)
5. Menu item
6. Menu item price

You can either write them on a piece of paper or type them into MS Word. The restaurant list cannot be exactly like anyone else’s. DO NOT limit yourself to restaurants here in Socorro; instead look for restaurants in other cities in New Mexico or even other states. You may use www.dexknows.com or www.restaurant.com and search restaurants in a certain city.

Tomorrow you will be guided through the process of creating your own database. So be prepared to follow oral directions.
